DETAILED ACTION

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In particular, the claims recite a folding multiplier configured to fold multiplicands and multipliers when they exceed a folding threshold, and the folding multipliers compute the product based on less than all the bits of the multiplicands and the multipliers. However, the specification fails to teach how to fold a multiplicand and a multiplier (what function is applied to a multiplicand and a multiplier to fold them) such that the folded multiplicand and multiplier are below a folding threshold, and the accuracy of the product will not be reduced. In addition, figure 1 describes a flow chart of a folding process for computing the product of a multiplicand X and multiplier Y. However, the process as described in the flow chart does not either fold the multiplicand and multiplier or involve a folded-multiplicand and a folded multiplier in described process. Further, the specification also fails to adequately explain what "F", "1*F" and their values are. The specification should have provided adequate teaching with examples for the above ambiguous problems.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by White (4,313,174).

White discloses in figure 3 a folding multipliers configured to fold multiplicand and multiplier that exceed a folding threshold (16 bit) into two parts (M,l) and computing a product of the multiplicand and multiplier based on these parts.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
